

# Share your screen on Hangouts Meet

You can present to your guests at your video meeting by sharing one window or your entire screen. They'll see exactly what you see on your screen.

1. [Schedule or join a Hangouts Meet video call.](#)
2. During your meeting, at the bottom corner of the screen, click Present .
3. Click **Present to Meeting**.
4. A pop-up offers you the choice to share your entire screen or one of your windows.

If you have several windows or programs open and you want to show one in particular, like the one with your presentation, click **A Window**. Then choose which window you'd like your guests to see. (They won't see any of the others.)

To share the whole desktop or screen, click **Your Entire Screen**.

5. Click **Share**. A message appears at the bottom right of your screen to notify you that you're sharing your screen.
6. Go to the window on your computer that you're presenting. Other people on the call will see that window.
7. To stop sharing your screen, return to the Hangouts Meet tab in your Chrome browser, and click **Stop Screen Sharing**.
